## SUMMARY

Software Engineer with 7 years of experience specializing in front-end architecture across both web and mobile platforms. Dedicated to building and scaling high-performance user interfaces that support thousands of daily active users. Drives the full frontend lifecycle, translating complex design into modular, reusable UI components, and active engineering applications for optimal runtime performance and core web vitals. I work cross-functionally with Product, QA, and Design to ship reliable and user-centric products that create impact and solve problems.

## EXPERIENCE

### Senior Software Engineer (Frontend) *Jan 2026 - Present*

*PT Horizon Internusa Persada / Travelio*

*Travelio is Indonesia's largest online platform for short- to long-term furnished apartment, villa, and house rentals, offering end-to-end property management services.*

- Slashed operational expenses by IDR 200 million monthly by architecting and deploying an in-app chat feature (React Native, WebRTC, WebSockets, Push Notification), successfully removing costly third-party vendor dependencies
- Streamlined field operations and the guest check-in experience by engineering a custom VoIP call, directly improving communication efficiency and ease of use for on-site operational team
- Boosted Core Web Vitals and overall application speed by driving critical technical modernization initiatives, effectively eliminating dozens of simultaneous API bottlenecks on initial load via strategic lazy loading
- Accelerated the delivery of features that successfully moved business KPIs by proactively mitigating technical risks through strategic, cross-functional alignment with Product, QA, and Design teams
- Revitalized the UI/UX for core conversion funnels (Homepage, Search, Property Details) during the v2 redesign by owning the frontend architecture and flawlessly translating complex Figma designs into highly scalable production code for App and Mobile Web

### Software Engineer (Frontend) *Nov 2019 - Jan 2026*

*PT Horizon Internusa Persada / Travelio*

*Travelio is Indonesia's largest online platform for short- to long-term furnished apartment, villa, and house rentals, offering end-to-end property management services.*

- Elevated UI consistency and accelerated development workflows by establishing a scalable design system and translating complex UI/UX designs into pixel-perfect, highly reusable components across React, Next.js, and React Native
- Powered the core consumer application’s reliability and growth by engineering and maintaining robust, highly scalable RESTful APIs to handle high-volume traffic.
- Drove higher booking conversions and optimized user discovery by overhauling search mechanics, introducing advanced filtering, dynamic sorting, and refined recommendation algorithms
- Secured flawless iOS and Android App Store releases by orchestrating rigorous pre-release hardening cycles and aligning Product, QA, and UI/UX teams to eliminate critical functional and UI bottlenecks

**Software Engineer (Frontend)** *Feb 2019 - Nov 2019*

*PT Paket Informasi Digital / MileApp*

*MileApp is a SaaS logistics and field service platform that helps companies optimize delivery routes, track couriers in real time, and manage end-to-end supply chain operations.*

- Optimized supply chain logistics and e2 e-commerce shipments by engineering responsive, high performance web applications that significantly reduced operational friction
- Boosted user engagement and strengthened digital presence by transforming complex UI/UX design into interactive, fast-loading web applications and high converting landing page
- Maintained system stability and reduced technical debt by systematically refactoring legacy components, establishing rigorous unit testing protocols, and proactively resolving critical runtime bottlenecks

**IT Support (Volunteer)** *Jul 2018 - Sep 2018*

*International Games Broadcast Service (IGBS)*

*IGBS is a joint venture between HBS and IMG that serves as host broadcasters for major multi-sport events.*

- Diagnosed and resolved on-site hardware and software issues to maintain operational continuity
- Managed the configuration and deployment of devices to ensure immediate readiness for incoming IGBS personnel

**Web Developer and Business Analyst (Intern)** *Aug 2017 - Feb 2018*

*PT Nutrifood Indonesia*

*Nutrifood is a leading Indonesian health f&b manufacturer, known for brands such as Tropicana Slim, NutriSari, L-Men, and HiLo.*

- Developed an internal web application using Ruby on Rails, according to business requirements and technical implementation
- Conducted business analysis to gather user pain points, and find an actionable software solution

## EDUCATION

**Web and App Development Program** *Nov 2018 - Mar 2019*

*Purwadhika Start Up and Coding School (Jakarta, Indonesia) - Short and Intensive Course*

**Computer Science** *Aug 2014 - Aug 2018*

*BINUS University Global Class (Jakarta, Indonesia) - Bachelor's Degree*

**Computer Science** *Jan 2017 - Jun 2017*

*Mahidol University International College (Thailand) - Exchange Program*

## SKILLS

**Fundamental:** HTML, CSS, JavaScript, TypeScript, SQL, NoSQL

**Frontend:** React, Next.js, React Native (Android and iOS), Tailwind CSS, Vite, TanStack, Vue.js, Redux, Zustand, WEB APIs, Socket.io, WebRTC

**Backend:** Express.js, Node.js, Next.js API routes/route handler

**AI Tools:** Codex, Claude Code, DeepSeek, Pi

**Database:** MySQL, PostgreSQL, Supabase, MongoDB

**Tools & Optimization:** Firebase, Cloudinary, CDN, Chrome Lighthouse, SEO, MoEngage, Git, Google Search Console, Visual Studio Code, ESLint, New Relic

**Project Tools and Deployment:** Bitbucket, Jira, GitHub, Vercel, Netlify

**Languages:** English (Fluent, TOEFL iBT 92/120), Indonesian (Native)
