SUMMARY

Software Engineer with 7 years of experience specializing in front-end architecture across both web and mobile platforms. Dedicated to building and scaling high-performance user interfaces that support thousands of daily active users. Drives the full frontend lifecycle, translating complex design into modular, reusable UI components, and active engineering applications for optimal runtime performance and core web vitals. I work cross-functionally with Product, QA, and Design to ship reliable and user-centric products that create impact and solve problems.

EXPERIENCE

Senior Software Engineer (Frontend) *Jan 2026 - Present*

PT Horizon Internusa Persada / Travelio

Travelio is Indonesia's largest online platform for short- to long-term furnished apartment, villa, and house rentals, offering end-to-end property management services.

- Architected a custom real-time chat and VoIP calling system in React Native using WebRTC and WebSockets, replacing paid third-party services and saving the company millions of IDR in monthly operational costs
- Led the end-to-end development workflow of multi-platform applications, ensuring seamless performance and architectural consistency across web and mobile environments
- Drove technical modernization and performance initiatives, implementing lazy loading to eliminate dozens of simultaneous API calls on load, optimize Core Web Vitals, and upgrade deprecated dependencies
- Partnered cross-functionally with Product, QA, and Design to refine requirements, mitigate technical risks, and deliver high-impact features that directly improved user experience and business KPIs
- Owned the frontend architecture for the v2 redesign across core conversion funnels (Homepage, Search, Property Details), translating complex Figma designs into production UI for App and Mobile Web

Software Engineer (Frontend) *Nov 2019 - Jan 2026*

PT Horizon Internusa Persada / Travelio

Travelio is Indonesia's largest online platform for short- to long-term furnished apartment, villa, and house rentals, offering end-to-end property management services.

- Translated complex UI/UX designs into scalable, pixel-perfect interfaces using React, Next.js, and React Native, while establishing best practices for design system implementation and component reusability
- Created and maintained scalable RESTful APIs behind the core consumer application
- Built and shipped booking and payment features such as Smart Doorlock sync, Add-On booking purchasing and scheduling, Internet Fix Line payment options, and automated push notification/reminder flows for post charge and utility payments
- Implemented search and discovery enhancements such as filtering (price range, tower, facilities), sorting logic, and recommendation logic improvements to increase booking conversion
- Collaborated with Product, QA, and UI/UX teams to resolve bugs and UI issues, including a dedicated pre-release hardening pass for iOS/Android App Store submission

Software Engineer (Frontend) *Feb 2019 - Nov 2019*

PT Paket Informasi Digital / MileApp

MileApp is a SaaS logistics and field service platform that helps companies optimize delivery routes, track couriers in real time, and manage end-to-end supply chain operations.

- Developed responsive web applications that streamlined end-to-end e-commerce shipment processes and enhanced supply chain logistics workflows
- Transformed complex UI/UX designs into web app, improving user engagement through attractive landing page
- Maintained quality by periodically troubleshooting critical runtime bugs, refactoring legacy components, create unit testing, and adapting frontend features to evolving user requirements

IT Support (Volunteer) *Jul 2018 - Sep 2018*

International Games Broadcast Service (IGBS)

IGBS is a joint venture between HBS and IMG that serves as host broadcasters for major multi-sport events.

- Diagnosed and resolved on-site hardware and software issues to maintain operational continuity
- Managed the configuration and deployment of devices to ensure immediate readiness for incoming IGBS personnel

Web Developer and Business Analyst (Intern) *Aug 2017 - Feb 2018*

PT Nutrifood Indonesia

Nutrifood is a leading Indonesian health f&b manufacturer, known for brands such as Tropicana Slim, NutriSari, L-Men, and HiLo.

- Developed an internal web application using Ruby on Rails, according to business requirements and technical implementation
- Conducted business analysis to gather user pain points, and find an actionable software solution

EDUCATION

Web and App Development Program *Nov 2018 - Mar 2019*

Purwadhika Start Up and Coding School (Jakarta, Indonesia) - Short and Intensive Course

Computer Science *Aug 2014 - Aug 2018*

BINUS University Global Class (Jakarta, Indonesia) - Bachelor's Degree

Computer Science *Jan 2017 - Jun 2017*

Mahidol University International College (Thailand) - Exchange Program

SKILLS

Fundamental: HTML, CSS, JavaScript, TypeScript, SQL, NoSQL

Frontend: React, Next.js, React Native (Android and iOS), Tailwind CSS, Vite, TanStack, Vue.js, Redux, Zustand, WEB APIs, Socket.io, WebRTC

Backend: Express.js, Node.js

AI Tools: Codex, Claude Code, DeepSeek

Database: MySQL, PostgreSQL, Supabase, MongoDB

Tools & Optimization: Firebase, Cloudinary, CDN, Chrome Lighthouse, SEO, MoEngage, Git, Google Search Console, Visual Studio Code, ESLint, New Relic

Project Tools and Deployment: Bitbucket, Jira, GitHub, Vercel, Netlify

Languages: English (Fluent, TOEFL iBT 92/120), Indonesian (Native)
